F-601

[SPECIFICATIONS]

Refer to Instruction Manual for basic operation of F-601 camera.

Major features

- (1) Built-in high-performance autofocus detection system based on a phase difference detection method.
- (2) Advanced focus tracking
- (3) Built-in speedlight
- (4) Easy operation with command input control dial and LCD panel indicator. Centralized LCD panel indicators on the camera's top plate and LCD viewfinder indicators.
- (5) Matrix metering and matrix balanced fill-flash
- (6) Spot metering capability
- (7) Full 5 exposure modes: Manual (M), Auto multi-program (Pm), Normal program (P), Shutter-priority (S) and Aperture-priority (A).
- 8) Exposure compensation and auto exposure bracketing
- (9) Variable delay self-timer and two-picture mode
- (10) Lens with no built-in CPU available in combination with the center-weighted metering and in A, M modes
- (11) TTL flash exposure compensation an rear-curtain sync
- (12) 6V lithium battery pack

Usable film

- (1) DX film speed setting: ISO25-ISO5000
- (2) Manual film speed setting: ISO6-ISO6400
- (3) Film speed is displayed in both internal and external LCD panels while pressing the film speed (ISO) button.
- (4) If non DX-coded film is loaded in auto film speed setting mode, a warning sign appears in LCD panels and shutter release operation is locked after advancing several blank exposures.
- (5) If DX-coded film is loaded in manual film speed setting mode, camera gives priority to the manually set ISO number.

Usable lens

- (1) AF Nikkor lens with built-in CPU: All functions are available.
- (2) Ai-P Nikkor lens with built-in CPU: All functions except AF are available.
- (3) Ai-S, Ai, modified Ai Nikkor lens: A and M exposure modes are available. Matrix metering is switched to center-weighted metering. FA is possible when maximum aperture value is f/5.6 or faster.

Exposure metering system

Maximum aperture exposure metering with 6-segment SPD.

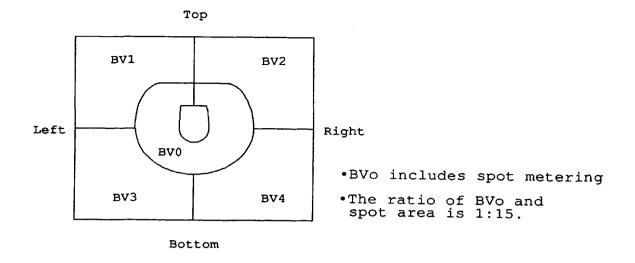

- Matrix metering
- •Center-weighted metering (75 ± 10% (Ø12) concentration)
- •Spot metering (100 + 0, -20%) (ø3.5) concentration)

Exposure metering range

EVO — EV19 (ISO100, AF50 f/1.4, 2 sec.(f/1.4) — 1/2000 sec. (f/16)

(Spot exposure: EV4 — EV19)

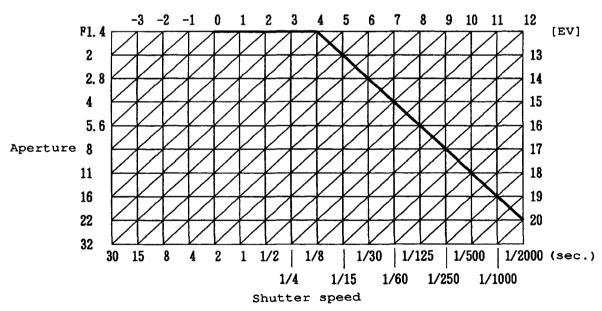

Matrix metering sensor pattern

Exposure mode

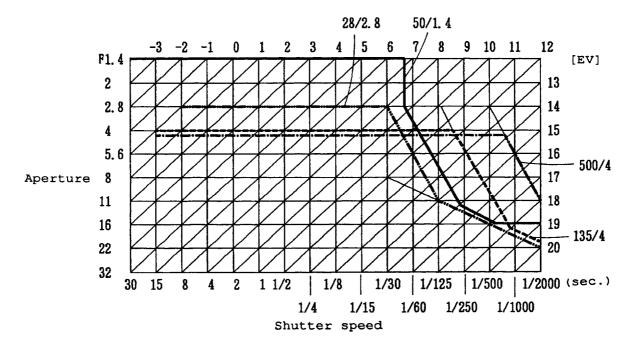

- (1) Normal program mode (P mode)
- (2) Auto multi-program mode (PM mode)
- (3) Shutter-priority mode (S mode)
- (4) Aperture-priority mode (A mode)
- (5) Manual mode (M mode)

Normal program mode (P mode)

- Program shift function is released when shutter prerelease timer is OFF, power switch is OFF or two buttons are reset. (in P and PM modes)
- If shutter speed is slower than the value of 1/(focal length) of the lens mounted, slow shutter speed alert (camera shake warning) appears. No alert or warning appears if shutter speed is faster than 1/500 sec. (in P and PM mode)

Auto multi-program mode (PM mode)

 Program charts vary depending on each AF Nikkor lens' focal length (16-500mm). The program charts are designed to overcome camera shake conditions particularly in low brightness. The program charts place priority on smaller apertures so that the shutter will be as fast as possible in medium brightness. In very bright conditions, the smallest aperture is moderated to avoid the affects of diffraction.

Shutter-priority mode (S mode)

- Shutter-priority mode becomes available only when Nikkor lens with a built-in CPU is mounted. Exposure mode is automatically switched to aperture-priority mode when other Nikkor lens is mounted. Exposure mode indicator blinks.
- Aperture value is displayed on the LCD at 1EV step. If aperture value is equal to maximum aperture value, the value is displayed at 1/6 steps.
- If aperture value is out of the controllable range, the aperture is controlled by minimum aperture (Fmin or High) or maximum aperture (Fmax or low). Shutter release is not locked. In S mode, you cannot set shutter speed to bulb setting.

Aperture-priority mode (A mode)

- The A mode is available within the shutter speed range of 30 sec. to 1/2000 sec. Shutter speed value is displayed at 1EV step.
- The aperture setting is shown as "F--" on the LCD when Nikkor lens with no built-in CPU is mounted.
- If shutter speed is slower than the value of 1/(focal length) of the lens mounted, slow shutter speed alert (camera shake warning) appears. No alert or warning appears if shutter speed is faster than 1/500 sec. If shutter speed is longer than 1/45 sec., the warning appears when Nikkor lens with no built-in CPU is mounted.
- If shutter speed value is out of the controllable range, the shutter speed is controlled at 30 sec. (Low) or 1/2000 sec. (High). Shutter release is not locked.

Manual mode (M mode)

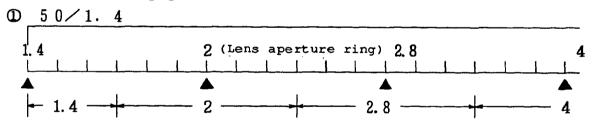

- Shutter speed and aperture values are displayed at 1EV step. If maximum aperture value is displayed at 1/6 EV step.
- NO Hi and Lo indicators are displayed.
- · Shutter speed can be set to bulb setting.

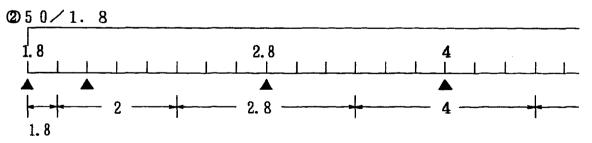

Aperture control in PM mode and S mode

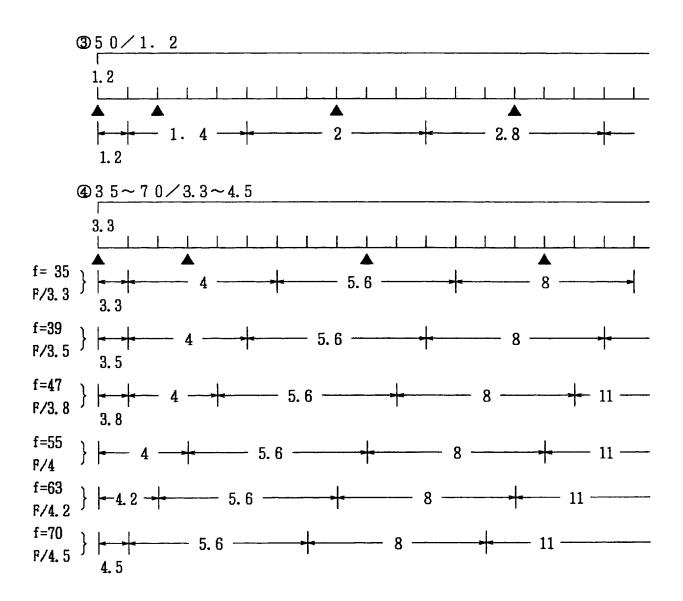

(1) Relation between the stroke of aperture coupling lever and pulse numbers

	Stroke	Pulse number
First step	0.975mm	12
Others	0.650mm	8

(2) Display of maximum aperture Display should change as shown in the following figures. " Δ " indicates clock stop position.

AE lock

- (1) Exposure data can be memorized as brightness values.
- (2) Shutter prerelease timer is retained while the AE lock is activated.
- (3) When AE lock is activated while using a speedlight, camera gives priority to the speedlight.
- (4) Metering mode selection is possible while AE lock is activated. In this case, exposure is controlled at the exposure mode selected.
- (5) When AF lock is activated, simultaneous AE-AF locks are available.

F-Fo signal

Mechanical coupling detection system within the range of 8EV. Input signal is analog.

signal

Fo signal detection is made by CPU data in the lens.

Fmin signal

Fmin signal detection is made by CPU data in the lens.

Fmm signal detection is made by CPU data in the lens.

identification signal

No mechanical detection is available. (No distinction is found between Ai and Ai-s.)

Viewfinder diopter

Visual field: 1 dpt Display: 1.1 dpt

Shutter prerelease switch

- (1) Shutter prerelease timer holds for 8 seconds.
- Shutter prerelease timer after shutter has been released holds 2 seconds after detaching the finger from the (2) shutter release button.
- Shutter prerelease timer holds until charging of the condenser is completed even when the finger is removed while the built-in speedlight is being popped up.

Auto film loading

- (1) Advances three blank exposures. Mirror moves but shutter does not operate.
- (2) No blank exposure is made when frame counter indicates more than "1".
- (3) No DX-code is read while advancing blank exposures. All DX contacts are grounded.

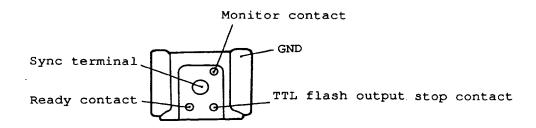

Frame counter

- (1) Frame counter displays E, 0, 1, ... 99.(2) Counting up when advancing film, counting down when rewinding film.

Film rewinding

- Exposure operation is prohibited.
- Film is rewound completely into film cartridge. (Standard setting)
- (3) No DX-code is read while rewind film. All DX contacts are grounded.

Accessories

Sync contact

Contact efficiency is more than 50% at both standard time of 1ms and 2.5ms.

Ready contact

- (1) Recognizing that a speedlight is mounted when the voltage of the dedicated speedlight is 1.4V (min.) and the current is $30\mu A$ (min.).
- (2) Ready-light LED lights up when the voltage of the dedicated speedlight is 2.4V (min.) and the current is 0.5mA (min.). It goes out when the current is under 0.1mA or less.

TTL flash output stop contact

- (1) Indicating the dedicated speedlight to stop firing when it is in TTL flash output mode. At this moment, the voltage of the contact is 0.3V or less and the current is approx. 20mA.
- (2) When the voltage of the contact of the speedlight becomes low for more than 10ms when shutter prerelease timer is OFF, camera's shutter prerelease timer goes ON.

Monitor contact

- (1) Recognizing that a speedlight in TTL flash output mode is mounted when the voltage of the monitor contact is 0.7V or less.
- (2) TTL flash output is not available when the voltage of monitor contact is 0.9V (min.).
- (3) The voltage of the contact is 0.43V to 1.85V for the input current of $80\mu\text{A}$ when main switch is OFF or shutter prerelease timer is OFF.

Lens releasing

The lens releasing and mounting angle is approx. 60.5°.

Aperture coupling ring

- (1) Aperture stop-down reading is 1/9EV steps.
- (2) θ 1 is 52° +0°, -1°
 - θ 2 is 113.5° or more.

- Aperture coupling lever
 (1) Total stroke is 7.4mm or more.
- Aperture stop down is completed in approx.110ms or less after shutter release switch has been ON at minimum aperture.
- (3) Actually, aperture stop down operation is completed in approx. 30ms at minimum aperture.

Main mirror

- (1) Main mirror moving up time: 20 to 30ms
- (2) Main mirror moving down time: 50 to 60ms
- (3) Main mirror bounding time when moving down: 90ms or less.
- (4) Full half mirror. Transmissivity: 35%

Shutter release if camera back is opened.

Available in any mode. (Same as that when camera back is closed.)

Built-in speedlight

- (1) Guide number: 13 (ISO100 in M mode)
- (2) Bounce angle: Covering 28mm lens
- (3) Charging time: Approx. 2.5 sec. (using fresh batteries at room temperature)
- (4) Light distribution characteristics:

	Vertical	Horizontal
-1EV	26.5° from	35° from center
	center	1

(5) Recommended usage warning

Warning indicator appears under either one of the following two conditions:

- •Center-weighted BV Spot BV ≥ 2
- •Center-weighted BV < 10 AV
- (6) ISO film speed setting available for TTL flash output: ISO 25 - 800

ISO film speed setting available for TTL flash output with external speedlight mounted.

 $1SO \ 25 - 1000$

Shutter release screw

Taper screw type

Screen shade

No shade which actually affects pictures appears with 800mm f/8 lens.

AF detection

TTL distance metering using a phase difference detection method with built-in AP2'.

AF detection range

EV-1 to EV19 (at maximum aperture of less than f/5.6.)

AF lens driving

- •Continuous servo AF mode
- •Single servo AF mode
- •Manual focusing mode

AF tracking

In each mode of AF (C or S) and each film advance mode (C or S), their combination, AF tracking is automatically activated when shooting a moving subject.

illuminator

AF illuminator is automatically set with Nikon dedicated speedlight is mounted when shooting a subject with approx. EV3 in single servo AF mode.

AF motor

- AF encoder outputs 312 pulses when a coupling shaft rotates one turn.
- (2) Motor rating: 14,500 rpm at 6V, under 270mA.

AF lens driving stops and at the same time auto focus is locked while AF is locked, shutter prerelease time is not

Power source

6V lithium battery pack (CRP2 type)

Battery check

Normal battery voltage: Approx. 6 to 4.8V

Shutter prerelease timer holds for

8 seconds.

Approx. 4.8 to 4.5V Warning appears:

Shutter prerelease timer does not

hold any moment.

Battery is exhausted: Approx. under 4.5V

All indicators blink during shutter prerelease operation and shutter

release is locked .

Current consumption

Less than $20\mu A$ (when main switch is OFF)

Less than $400\mu A$ (when main switch is ON and shutter prerelease timer is OFF.)

Less than 240mA (when exposure metering or focusing operation is activated, or shutter prerelease switch is ON.)

Less than 500mA (when driving AF 50mm f/1.8 lens)

Battery life lasts for 7 hours at room temperature (when shutter speed is set to BULB.)

Function guaranteed conditions

Camera functions normally at 0° C to $+40^{\circ}$ C with relative humidity of less than 80%, or camera functions normally at -10° C with relative humidity of less than 50%.

Normal operation guaranteed conditions Camera works normally at $+40^{\circ}\text{C}$ with relative humidity of 85%, or camera works normally at -20°C to -10°C with relative humidity of less than 50%.

Guaranteed storage conditions

Camera functions normally in 20 hours after storing it for 20 hours under the environment at $+60^{\circ}$ C with relative humidity of less than 60%, or at $+50^{\circ}$ C with relative humidity of 85%, or -30° C with relative humidity of less than 60%.

2. Unavailable lens

Lenses other than listed above are not usable.

The following are lenses to which special care should be taken.

(1) Rear end of the following old lenses interferes with main mirror and the body is damaged.

(These old lenses are not recommended in this respect.)

Fisheye 6mm f/5.6 656001 or after all others Fisheye OP 10mm f/5.6 180011 or after all others

- (2) Old lenses (those prior to Ai lenses, except modified Ai lenses) interfere with F-Fo coupling ring (not swing-up type) of body, and the F-Fo coupling ring is damaged.
- (3) Aperture ring of the following lenses interfere with F-Fo coupling ring, and the body may be damaged.

*200 - 600mm f/9.5 280001 - 300490** *ED 180-600mm f/8 174041 - 174166** 174031 - 174087** *ED 360-1200mm f/11 *400mm f/5.6 + focusing unit AU-1 For all lenses *600mm f/5.6 + focusing unit AU-1 For all lenses PC 28mm f/4 174041 - 180900 PC 35mm f/2, 8 851001 - 906200 Reflex 1000mm f/11 142361 - 143000 Reflex 2000mm f/11 200111 - 200310

The above mentioned lenses will be usable with some modification and repair. But lenses attached with "*" are not usable because stop-down by preview button of the body and coupling of exposure meter by metering are necessary. (But they work if used in M without using exposure meter.)

**The following three lenses may not be used even through they are in the attachable range.

(4) Following lens is not usable due to the lack of sync terminal on F-601 and F-601M.

Medical 200mm f/5.6 104011 or after all others. But usable when hot shoe adapter (AS-15) is used together (in M mode).

(5) The following teleconverter for F3AF is not usable.

AF TC-16S

200001 and after all others

(6) The following teleconverter is not usable due to lack of Ai coupling capability.

TC-1

175121 and after all others

TC-2

175071 and after all others

(7) Lenses for F3AP

To prevent malfunction, never use the following lenses

AF Nikkor 80mm f/2.8S (for F3AF)

AF Nikkor ED 200mm f/3.5S (IF) (for F3AF)

AS-10	0	FSW52101 TTL multiflash adapter	SB-15, 16B, 20	Use SC-18, 19 to connect additinal flash prior to flash or SC-17.	Accessory shoe (4 contacts) Multiflash terminal *3 Tripod socket
AS-11	0	PSW52201 Tripod adapter	SB-16A, 17	(Same as above)	For F3 shoe Tripod socket
AS-12	. Δ	FSW52701 Micro speedlight controller	SB-21 (SB-21 + AS-12 = SB-21A)	Controlling SB-21 unit (flash head). For F3. Attaching AS-12 on camera.	External power connector Power selection SW Connector (8 pins) for flash head For F3 shoe
AS-13	_	Blank	·_	_	
AS-14	0	PSW52801 Micro speedlight controller	SB-21 (SB-21 + AS-14 = SB-21B)	Controlling SB-21 unit (flash head). For F-501, F-301, FA, FE2, and FG. Use a connector to connect to SB-21 after attaching AS-14 to accessory shoe of camera.	Ready-light Flash mode
AS-15	0	Hot shoe adapter	-	Attaching to camera with no sync terminal provided, using sync terminal of AS-15.	Sync termial For hot shoe

5. Shutter release-related accessories

Abbreviation	Usable or not usable	Order No./ Product name	Remarks
AR-1	×	20PA61 FWW00401 Soft shutter	Putting on covered type shutter release button, (F2, FE)
AR-2	(Usable in combination with AR-8)	20PA60 FWW00501 Cable release	For cameras with covered-type shutter release button. (F2, FE) Take care interference between shutter release portion and lens when used with F-801 (though MR-1 or MR-2 is necessary.)
AR-3	0	31FA60B PWW00601 Cable release	For cameras (F3, FA, FE2, New PM2, FG, FG-20, EM, etc.) with taper screw shutter release button provided. MR-3 is required for use with P-801. Take care for interference between shutter release portion and lens. MC-12 is alternatively available.
AR-4	(Usable in combination with AR-8)	20PA60W PPW21601 Double release	Close-up shooting is possible at full aperture using PB-6 + AR-4. Also possible with PB-4, 5 + BR-4 + AR-4. Cameras with covered-type shutter release button (F2, FE). AR-10 is alternatively available. It is possible to attach to F-801 with MR-1, 2, but likely to interfere with bellows.
AR-6	0	PWW01101 Grip shutter release	Connecting between pistol grip and taper screw-type shutter release portion. When using with F-801, MR-3 is required. Be careful with interference between shutter release (MR-3) and lens.
AR-7	0	40FA60W FPW21701 Double release	Same function as in AR-4. For cameras with taper screw-type shutter release button. It is possible to attach to F-801 with MR-3, but likely to interfere with bellows. AR-10 is alternatively available.
AR-8	0	PWW01001 Release adapter	Conversion adapter making covered-type shutter release button possible to be used with cameras with taper screw-type shutter release button.
AR-9	0	FWW01201 Soft shutter	Putting on taper screw-type shutter release button. (F3, etc.)
AR-10	×	FPW21901 Double release	Close-up shooting is possible at full aperture using F-801 + BP-6. Connecting the tip of cable for camera to the remote connector. (Electrical release)

Adaptability with remote control accessories

Following accessories are not usable (becouse lack of remote terminal)

MC cord

MC-3A, MC=4A, MC-5A, MC-8A, MC-12A, MC-16A

MC-1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 17S, 18

FX-1723

Remote control accessories

Pollowing accessories are not usable (because lack of remote terminal) MT-1, MT-2, MW-1, MW-2, ML-1, ML-2, MR-1, MR-2, MR-3

FAA24051-R. 3282. A FAA25051-R. 3281. A 6. Reprocopy outfit and close-up accessories

(1) Reprocopy outfit accessories

Abbreviation	Usable or not usable	Order No./ Product name	Remarks

PPW00202 PPW00202 PPW00201 PPW00301 Adapter ring AAP lens measured ring of BR-2. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Specifications are common to BR-2. Afrom place of BR-4. Specifications are common to BR-2. Specifications are common to SR-4. Specif

7. Other accessories

- (1) Polarized filter (52mm, 62, 72mm) cannot be used.

 Circular polarized filter is usable.
- (2) Body cap BF-1 cannot be used. (Do not attach otherwise interferes with mount.) BF-1A is alternatively available.
- (3) Angle finder DR-3 can be used in combination with eyepiece adapter.
- (4) Magnifier DG-2 can be used in combination with adapter.
- (5) Eyepiece correction lens, eyepiece cap (for F-401, FG, EM) can be used.
- (6) Close-up lens can be used.
- (7) Cases are common to those for F-601M, F-601.
 Standard case CF-45 (FAE07601) for camera with 35-70mm lens.
 Case CF-46 (FAE07701) for camera with 35-135mm lens.

DISASSEMBLING PROCEDURE CHART

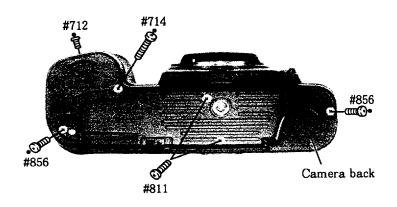

DISASSEMBLING

Note:

- 1 Remove batteries before disassembling.
- 2 When disassembling, play close attention to the wire arrangement and mounting positions and types of screws to be removed.
- 3 Be sure you are grounded when holding main FPC because static electricity exerts serious adverse effects on ICs.
- 4 The " " mark on the screws indicates they are tap-tight screws.
- (5) The tone of pictures may be different from actual one. Make sure of the shape of parts when disassembling and reassembling.

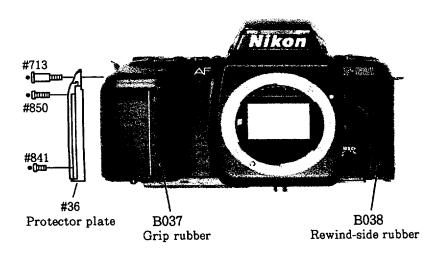

1. DISASSEMBLING OF REAR BODY AND FRONT PLATE

BOTTOM COVER

- When the bottom cover is removed, discharge the main condenser.
- Remove bottom cover to detach camera back.
- There is a washer at upper shaft of camera back.

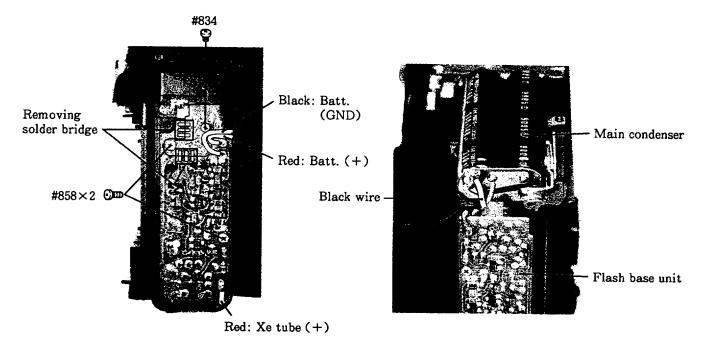

GRIP RUBBER, PROTECTOR PLATE

Remove screw #841 after peeling grip rubber off.

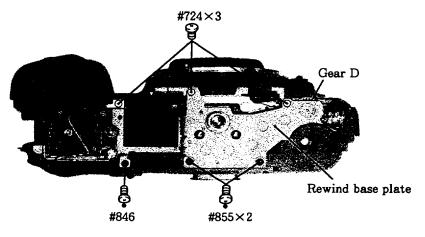

FLASH BASE UNIT

Note: Be sure to discharge the main condenser.

Remove only the black wire (Xe: GND) of the main condenser unit, and remove the condenser from the rewind base plate with flash base unit.

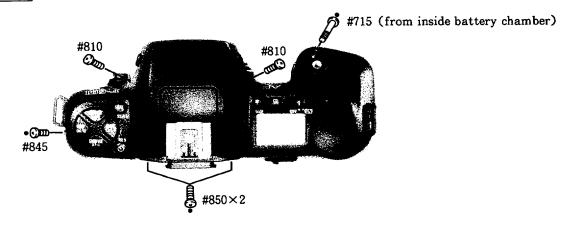

REWIND BASE PLATE

Rewind gear D #194 can be detached.

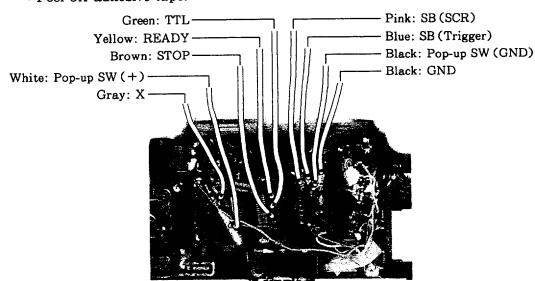

TOP COVER

REMOVING SOLDERING OF TOP COVER WIRES

* Peel off adhesive tape.

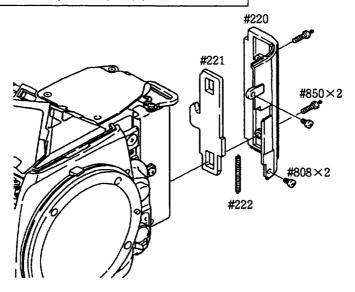

Black: GND (Negative side land of battery contacts)

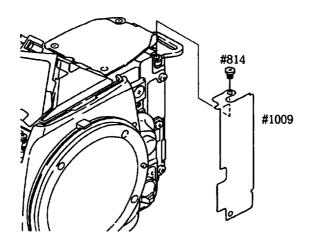

- White: Shutter pre-release SW - Red: Shutter release SW

Pull out the thick red and black wires of the top cover through this space.

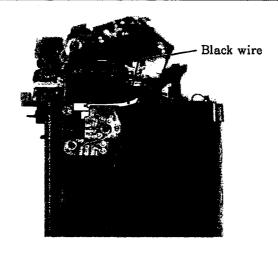

CAMERA BACK OPEN/CLOSE COVER PLATE

SHIELD FPC

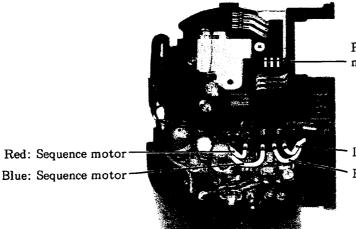

BLACK WIRE OF THE LUG PLATE AT THE HAND GRIP SIDE

- D6 • F-601_{AF} -

REMOVING SOLDER ON THE UPPER PART OF HAND GRIP

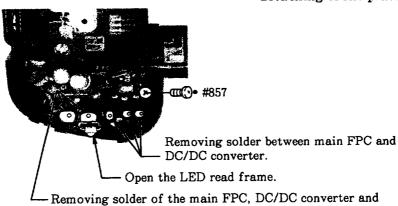

Removing solder between main FPC and command dial brush.

Light Blue: Aperture Mg

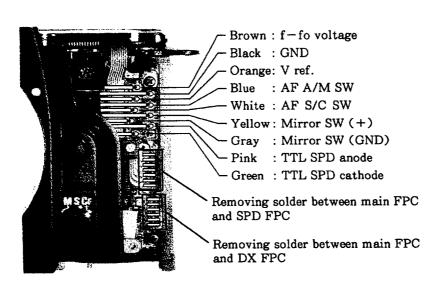

Red: Aperture Mg

Note: You are not required to remove red and blue wires (aperture Mg) when detaching front plate.

REMOVING SOLDER ON FRONT FILM REWIND SIDE

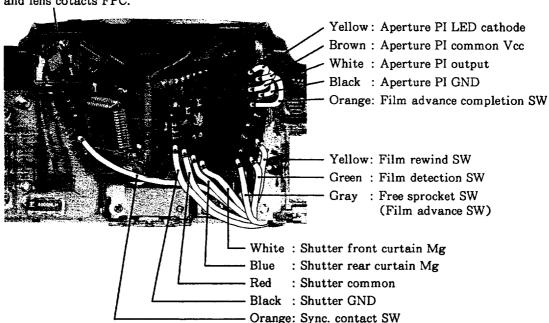

battery contacts.

Note: You are not required to remove solder all wires, between main FPC and SPD FPC when detaching front plate.

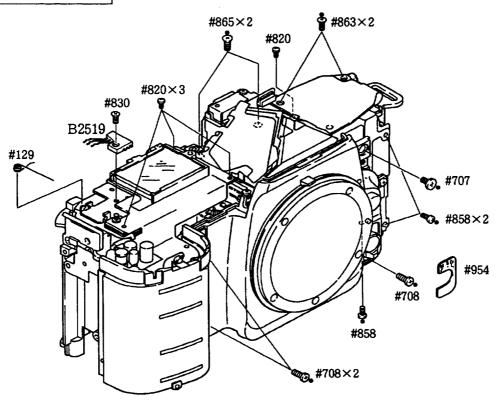

REMOVING SOLDER ON THE UPPER PORTION OF PENTA PRISM

Removing solder between main FPC and lens cotacts FPC.

Note: You are not required to remove solder between front four wires (except for orange) and between main FPC and lens contact FPC when detaching front plate.

REMOVING SCREWS

Data Back

(1)	Specifications	В 1
(2)	How to Check	В 2
(3)	Explowded Drawings	В 3
[4]	Parts List	В 4

[1] Specifications

Type:

Liquid crystal display; built-in quartz digital watch

Film speed:

 $1S032 \sim 3200$

Imprinting Signal time: ISO32 ~ 80

100ms

IS0100

60ms

IS0125 ~ 200

45ms

ISO 50 \sim 400

30ms

IS0500 ~ 3200

20ms

Imprint mode:

1. Year/Month/Day

2. Day/Hour/Minute

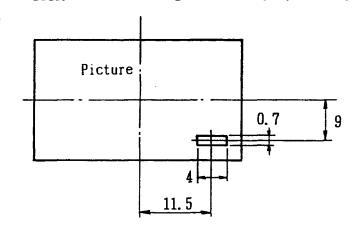

3. No imprint

4. Month/Day/Year

5. Day/Month/Year

Automatic date adjustment from Jan. 1st, 1987 to Dec. 31, 2019. Lower two digits are displayed for year.

Imprinting position:

Power source:

3V Lithium battery (CR2025 x1)

Clock accuracy:

 ± 90 sec./month at 20° c

Dimensions:

Approx. 154.5(W) \times 100.0(H) \times 67.0(D) mm

Weight:

Approx. 660g (Without batteries)

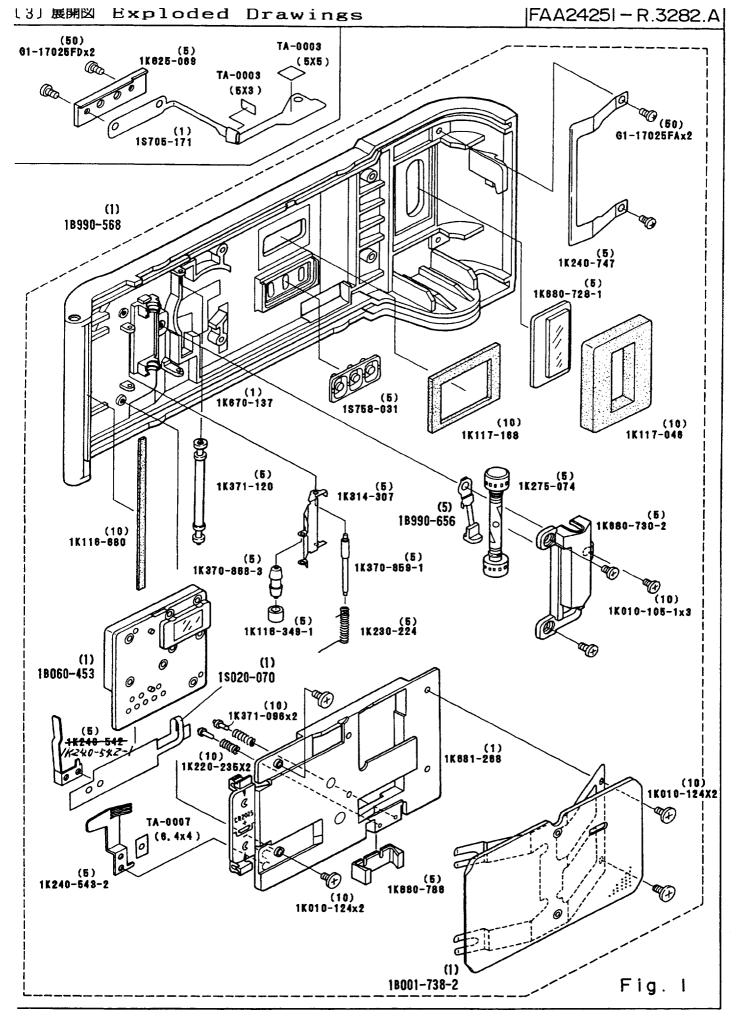

[2] How to check

- Judgement of data imprinting signal.
 Output of data imprinting signal can be confirmed by the tester.
 - 1) Select the DC $0.1 \sim 10V$ range of the tester and connect the tester to data back contacts of the body.
 - 2) If the signal is output, the needle of the tester moves for an instant when shutter is released.
 - 3) Imprinting signal time can be checked in the same method as above using the Oscilloscope instead of the tester.

2. Inspection of imprinting

- 1) Attach mending tape on the data imprinting window of the pressure plate.
- 2) Connect between DB contacts of body and DB contact pins. (Do not connect by soldering)
- 3) Release the shutter, inspect the data imprinted on the mending tape using a magnifying glass.

Imprinted data is reversed and should be the same as displayed.

REMOVING FRONT PLATE

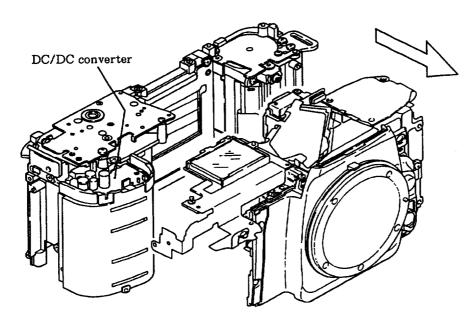

255

Shutter charge lever (rear body side)

Shutter set lever (front plate side)

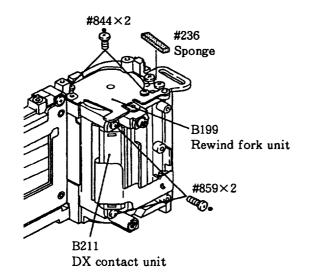

Give care to the hooking two levers as shown in the picture.

- Remove front plate forwardly while giving care to wires and FPC.
- DC/DC converter can be removed.

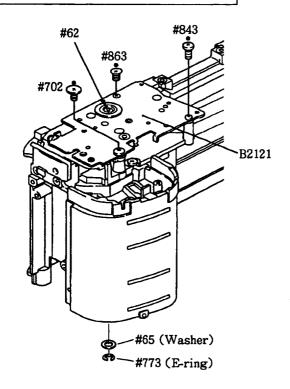

2. REAR BODY

DX CONTACT UNIT, REWIND FORK UNIT

Detach rewind fork unit to remove rewind gear shaft #195 and gear #196.

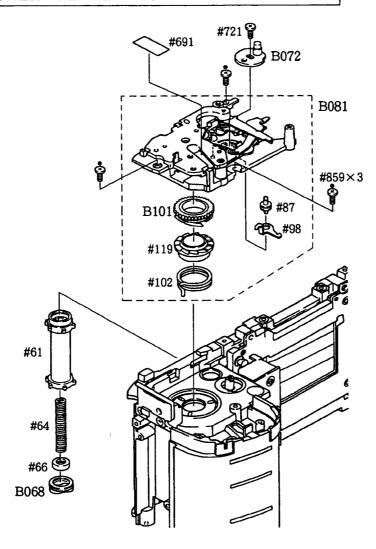

UPPER FILM ADVANCING UNIT

Remove E-ring and washer at the lower of sprocket shaft #62.

Note: Remove screws (×3) only to detach upper film advancing unit.

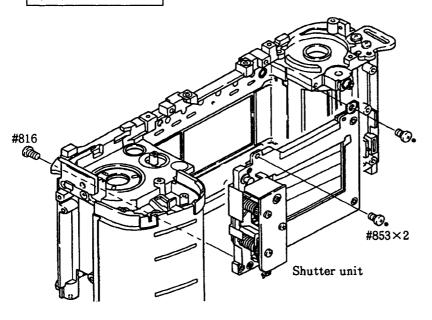

LOWER FILM ADVANCING MECHANISM UNIT

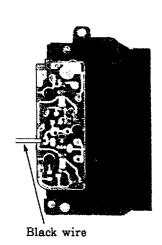

- Remove screw #721 which holds reference shaft disk B072.
- Peel off adhesive tape #691.

SHUTTER UNIT

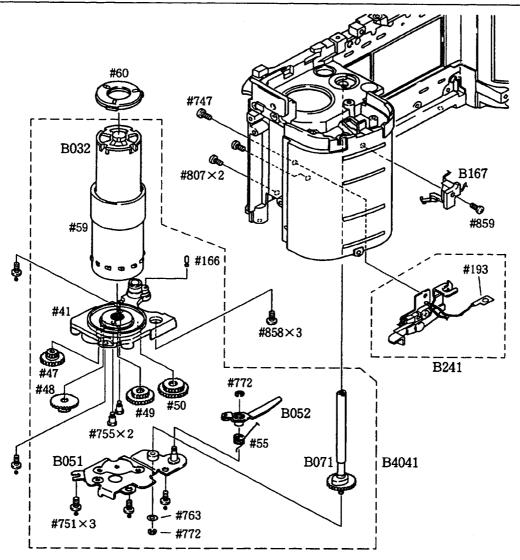

8

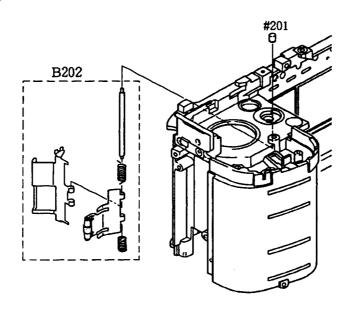

Remove black wire (film advance SW) from shutter PCB.

FILM ADVANCE SW, REWIND SW UNIT, MOTOR ROTATION REDUCING UNIT

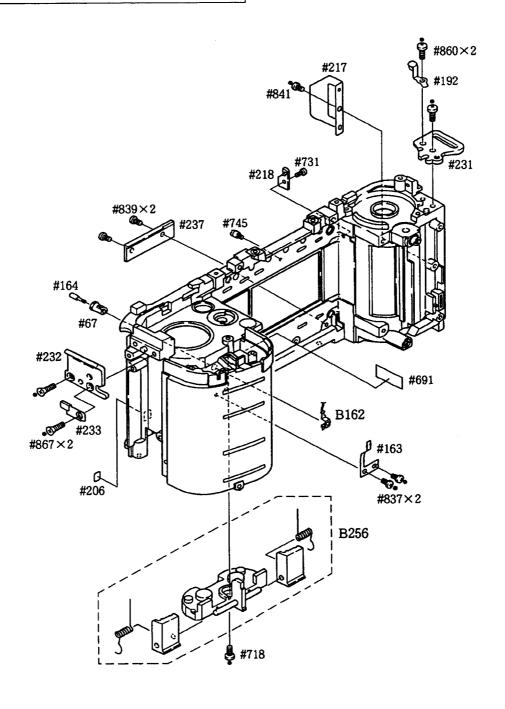

FILM ROLLER

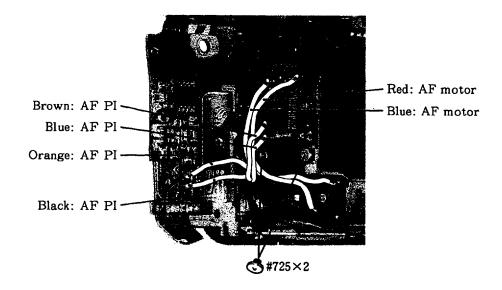

- D 12 • F-601_{AF} -

REAR BODY DIECAST SMALL PARTS

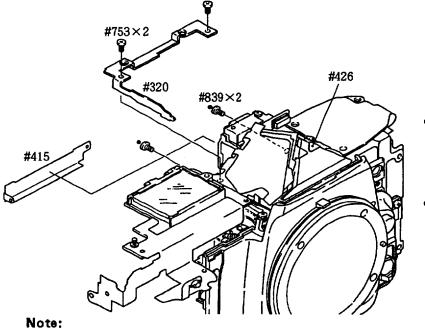

3. FRONT PLATE

AF FPC, REMOVING SOLDER OF MAIN FPC WIRES, REMOVING PRESS-CONTACT

MAIN FPC

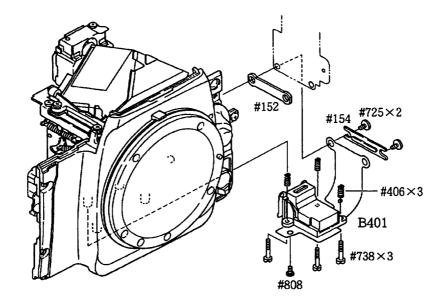

Supposing that soldered portion as shown in pages D6 to D8 have all been removed.

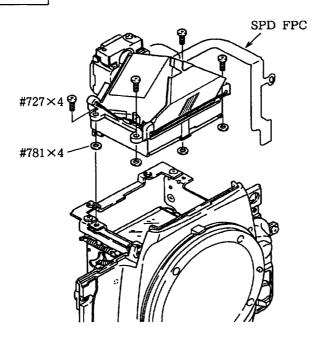

- Screws #839×2 indicate fixed screws inside viewfinder display.
- Peel off main FPC from penta prism holding plate #426.

- 1 Do not peel main FPC forcibly or it may be damaged, because it is bonded by double coated adhesive tape. Refer to page D16, the way to remove main FPC by removing penta prism holding spring #427 and take off FPC together with penta prism holding plate #426, when you take off main FPC only.
- ② Unless otherwise removing I base plate or L base plate, return IL supporting plate back to the original position. If you remove prism box BB421 with IL supporting plate removed, the gap between I and L base plates vary.

AF FPC

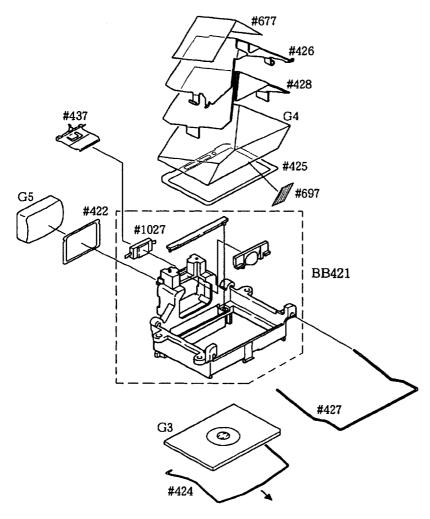

PRISM BOX

* Never remove SPD FPC unless it is necessary.

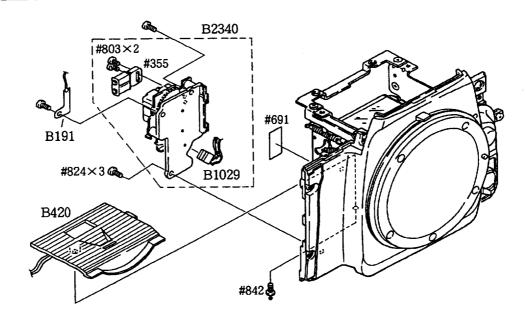

PENTA PRISM, SCREEN

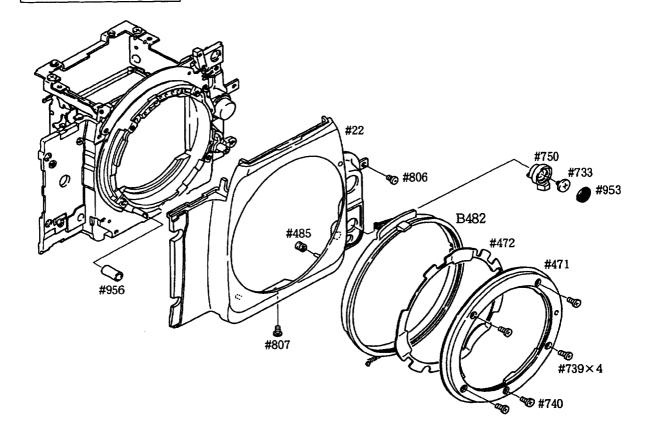

- When removing screen G3, pull screen spring #424 in the direction indicated by arrow.
- You can remove screen after the body is completely assembled.

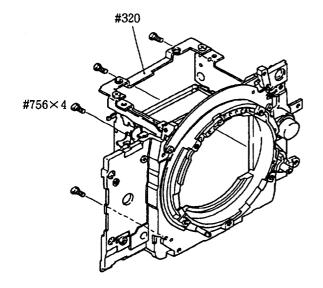

APERTURE CONTROL UNIT, MIRROR BOX BOTTOM PLATE

APRON, BAYONET

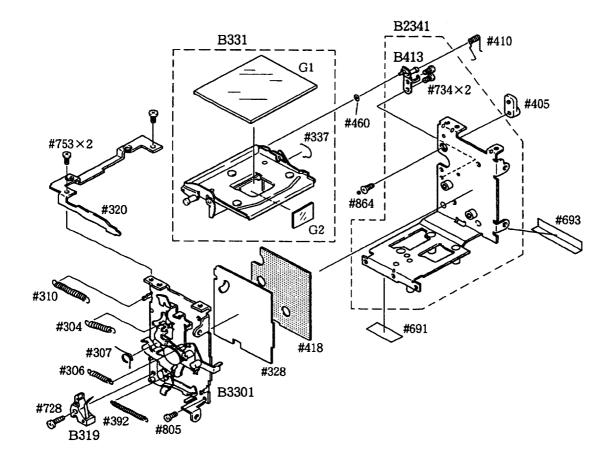

I & L BASE PLATES

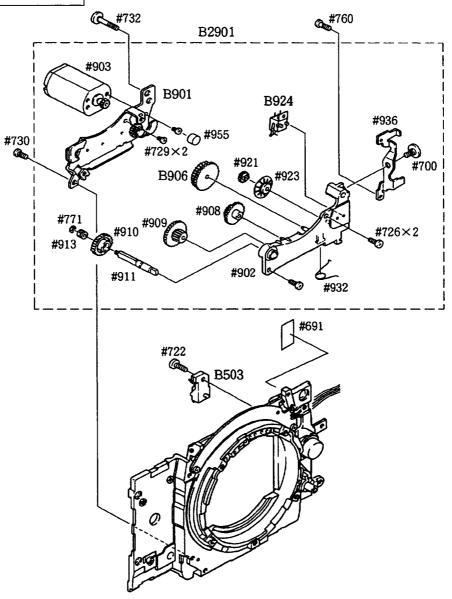

Note: Never remove IL supporting plate #320 unless otherwise disassembling I or L base plate, or the gap between I & L base plates may vary and malfunction the movement of mirror.

DISASSEMBLING I & L BASE PLATES

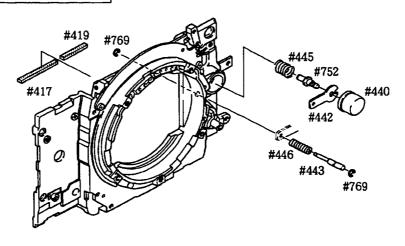

- Remove screws #753×2 of IL supporting plate #320.
- Remove screws #805, and #728 of mirror SW.

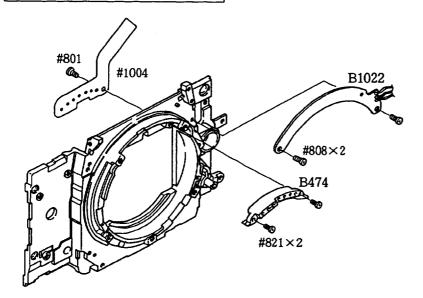

AF DRIVING UNIT

LENS RELEASE BUTTON

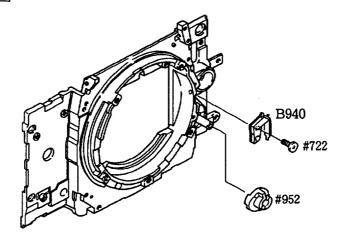

LENS CONTACT, f-fo PCB

Remove solder of lens contact FPC #1004.

AF MODE SW

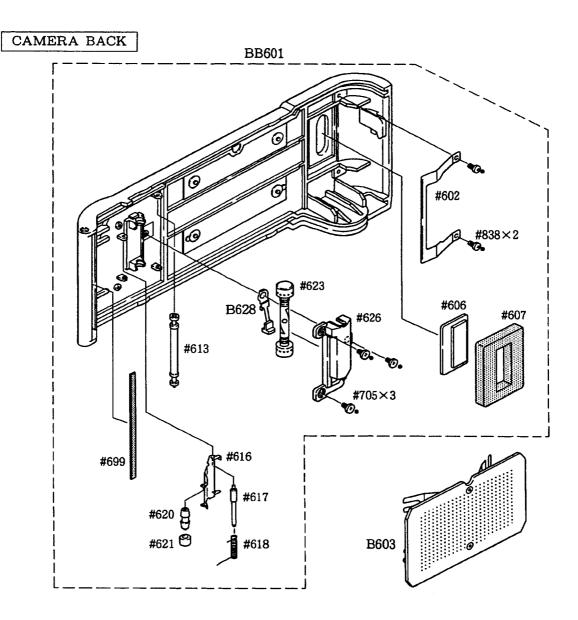

4. OTHER ASSEMBLY PARTS

B524 #431

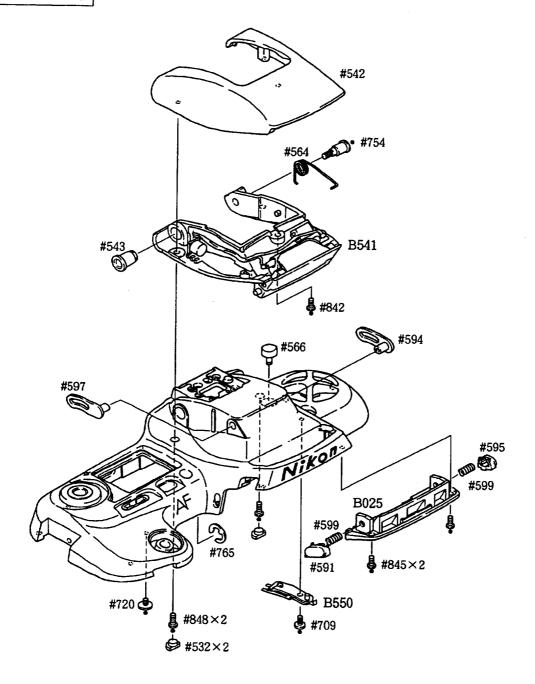

- Parts with part numbers are not included in assembly parts.
- LCD window B524 is secured on the top cover with black double coated adhesive tape.

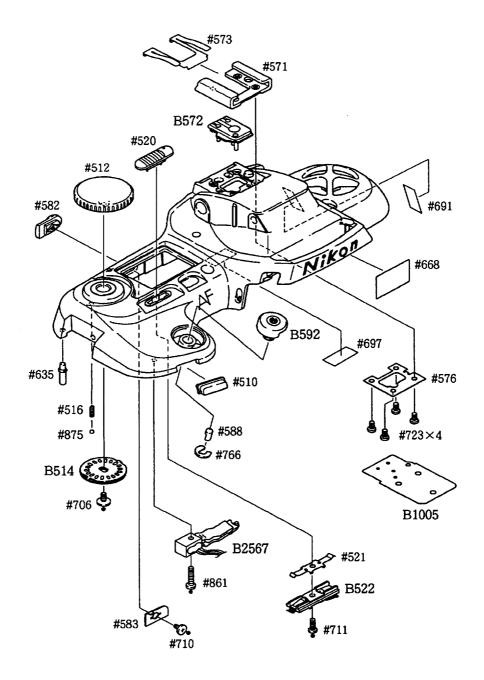

#528

- D21 • F-601_{AF} -

TOP COVER

■ For other parts, refer to Assembling and adjustment section or exploded drawings.

ASSEMBLING

1. REAR BODY

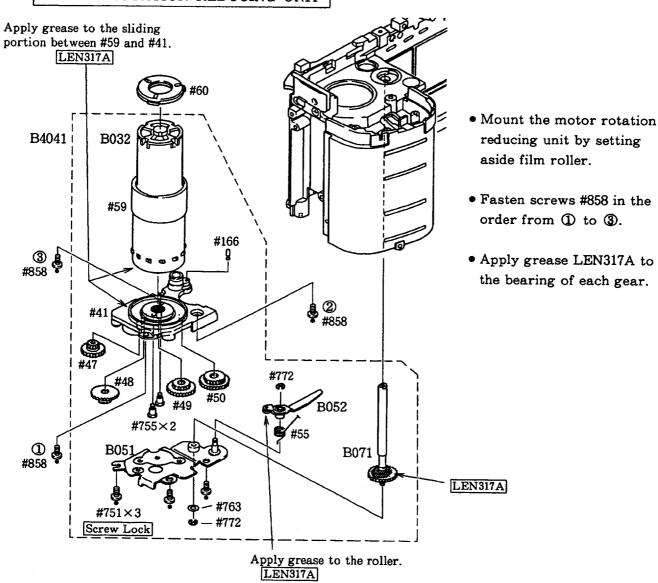

DIECAST SMALL PARTS

BODY-SIDE FILM ROLLER

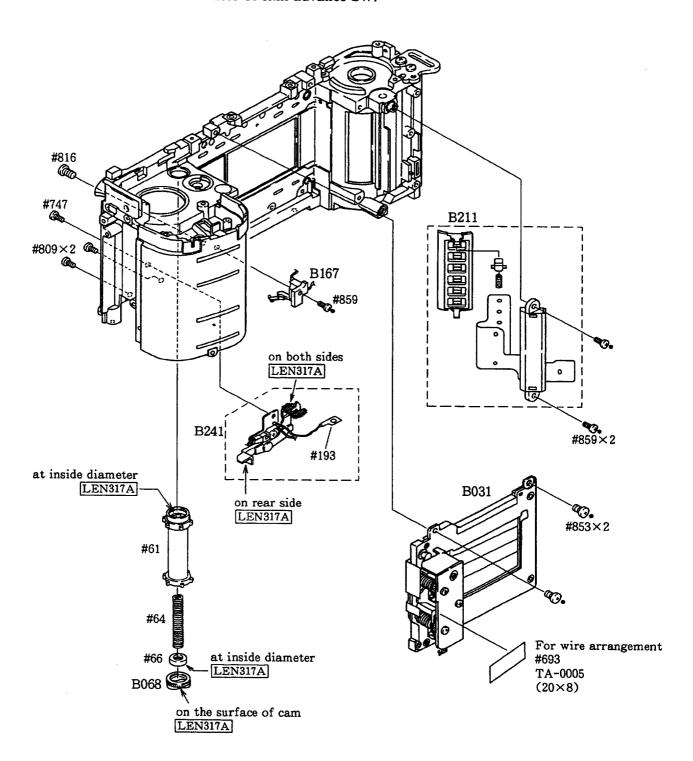

MOTOR ROTATION REDUCING UNIT

- A 2 • F-601_{AF} -

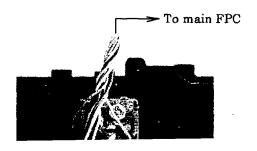

SPROCKET, FILM ADVANCE SW, REWIND SW UNIT, SHUTTER, DX CONTACTS

- Contact of film advance SW should be on the pin #166 of motor rotation reducing unit correctly.
- Do not bend the contacts of film advance SW.

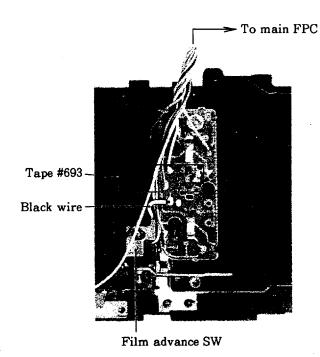

FAA24051-R.3282.A

SOLDERING BLACK WIRE OF FILM ADVANCE SW

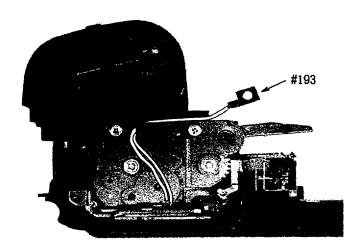

Twist wires (X8) to be soldered to

SOLDERING BLACK WIRE OF FILM ADVANCE SW

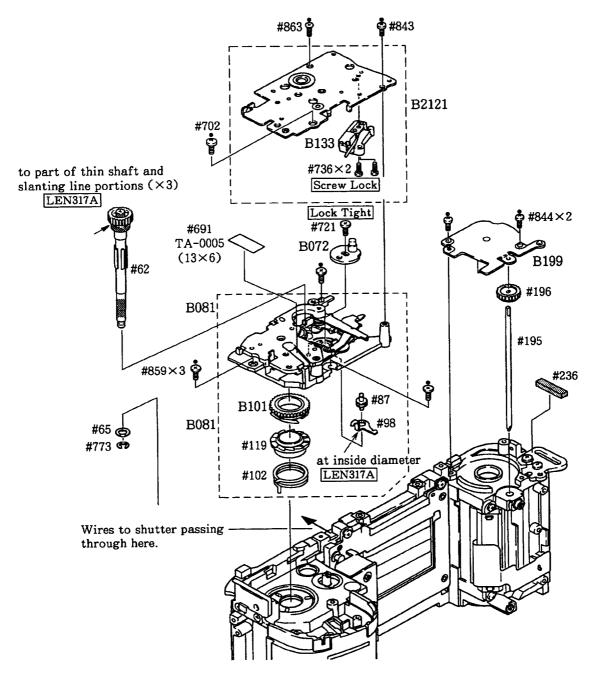

Twist wires (×8) to be soldered to FPC twice counter-clockwise.

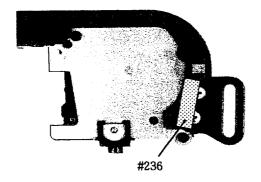

ARRANGEMENT OF WIRES OF FILM REWIND SW BASE PLATE

LOWER FILM ADVANCING MECHANISM UNIT, REFERENCE SHAFT DISK, FILM REWIND FORK, UPPER FILM ADVANCING UNIT

Note: More detail for assembling, refer to from next page.

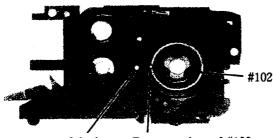

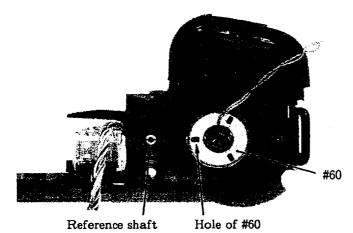

Apply dew protection sponge #236 on the screws as much as it covers half of them.

LOWER FILM ADVANCING MECHANISM UNIT ASSEMBLING POSITION

Rear side of lower film advancing mechanism unit

Mark Bent portion of #102

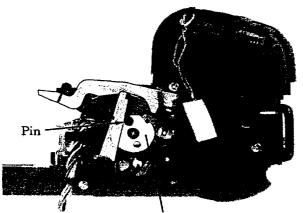

- ① Align bent portion of #102 and mark.
- 2 Align hole of #60 to sideway of reference shaft.
- 3 Set bent portion of #102 to hole of #60 as shown in the picture.

ASSEMBLING REFERENCE SHAFT DISK

Put shutter charge lever of film advance rotation reducing base plate toward the lens mount side (the most forward position).

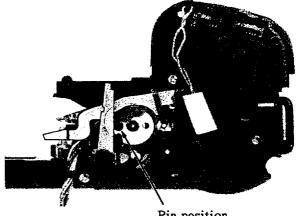

(Use tool J15287: a manual film advance tool.)

Mounting position

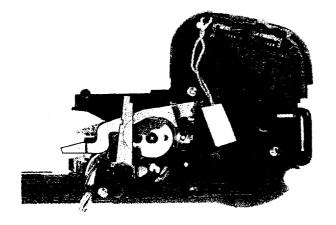

Reference shaft disk

After mounting, the position of upper film advancing unit should be aligned at the position as shown in the picture below.

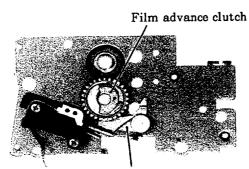

Pin position

MOUTING UPPER FILM ADVANCING UNIT

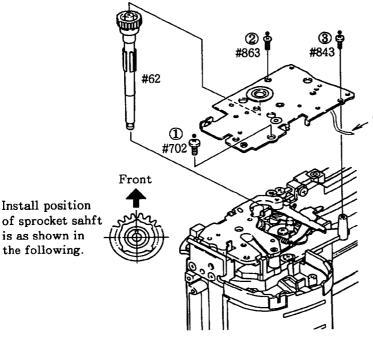

• Position of reference shaft disk.

Film advance stopper lever

- Upper film advancing unit setting position.
- 1) Position of film advance clutch is shown in the picture.
- 2 Film advance stopper lever is positioned at the hollow position.

is as shown in

the following.

Sprocket tooth position: 27.7-04 mm

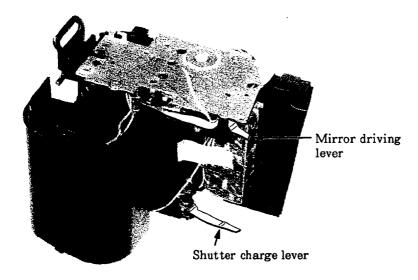

• Fasten screws in the order from 1 to 3.

Through wire inside post of lower film advance mechanism unit.

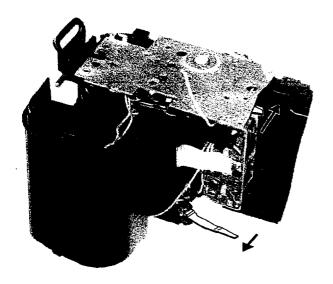

- After having finished mounting, insert a washer #65, and an E-ring #773 at the low end of sprocket shaft.
- Thread position of sprocket is as shown in the following figure.

CHECKING THE MOVEMENT OF MIRROR DRIVING LEVER AND SHUTTER CHARGE LEVER

① Turn the manual film advance tool J15287 counter-clockwise as far as it stops. Both levers should be at the lens mount side as shown in the picture.

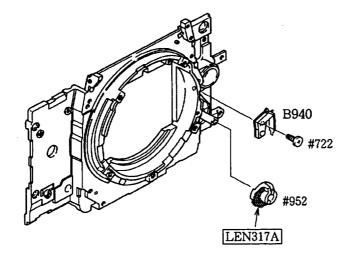

- ② Turn the manual film advance tool J15287 clockwise so that shutter charge lever only comes to the front most position at the lens mount side. And mirror driving lever is as shown in the picture.
- 3 Remove the tool.

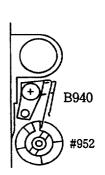

2. FRONT PLATE

AF S/C SW

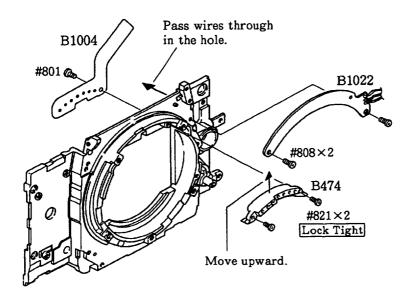

()

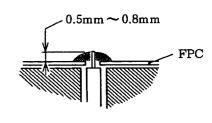

Attaching position of #952

LENS CONTACT, f-fo PCB

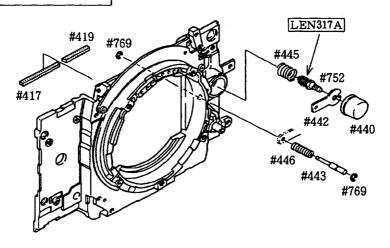

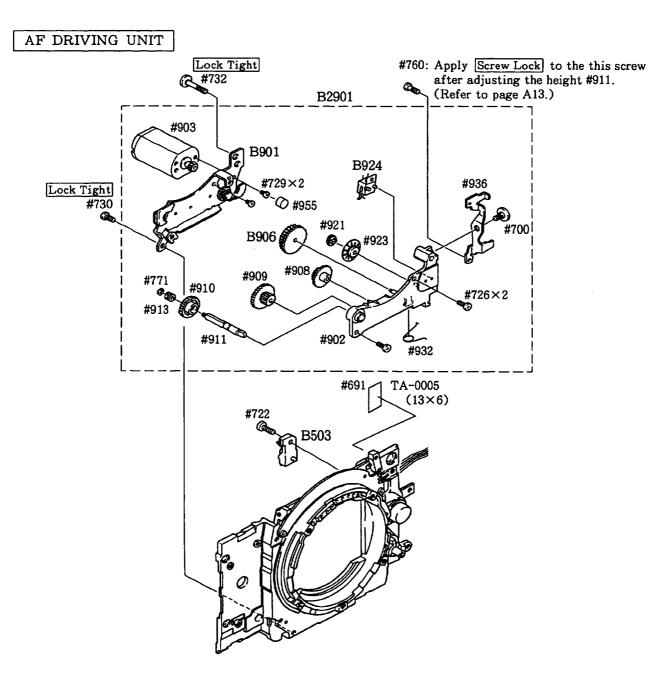

Height of solder for soldering lens contact FPC

Pass wires of f-fo PCB through the hole of front plate to the inside.

LENS RELEASE BUTTON

- A 10 • F-601_{AF} -

MIRROR BOX

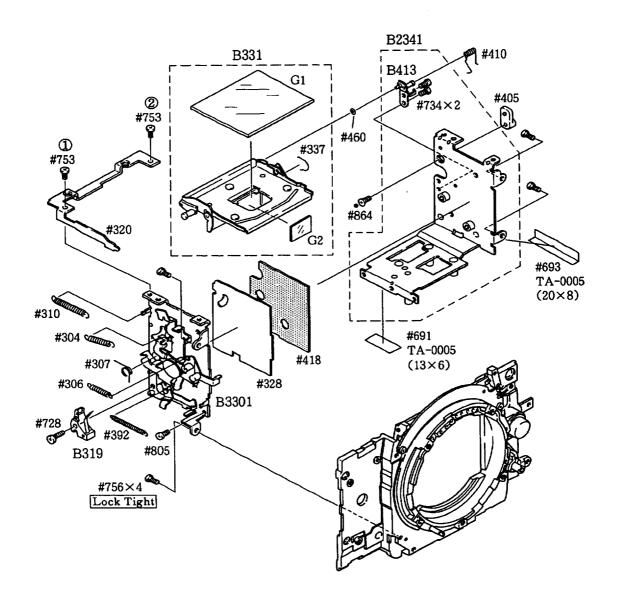

(S. S. S.

(3c.

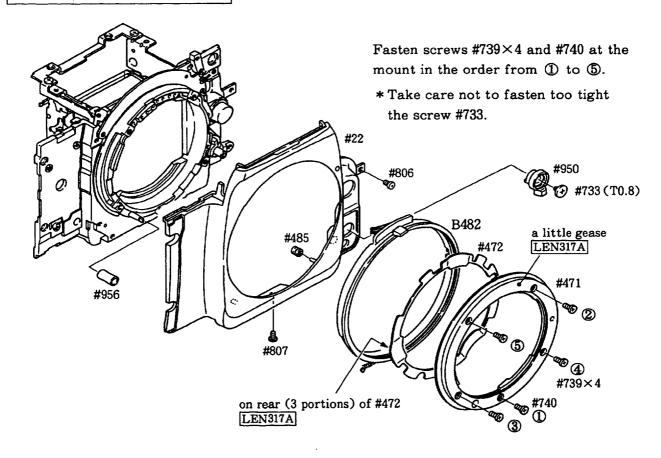

Frosted B413 coating applied position

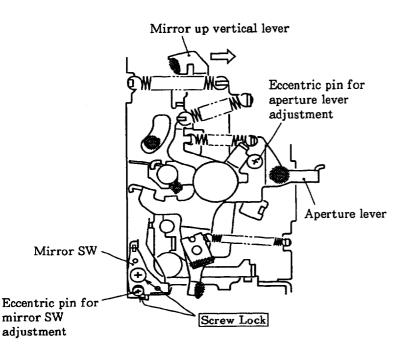

- Adjust the gap in the horizontal direction of mirror with #460. The gap should be as small as 0.1mm.
- Mirror should move smoothly when moving the mirror up and down manually.
- Secure the gap between I & L base plates with #320 and remain as it is until main FPC is mounted.
- Fasten screws #753×2 in the order from ① to ②.

APRON, BAYONET MOUNT

SPRING HOOKING POSITION, OILING PORTION, APERTURE LEVER POSITION AND MIRROR SW

- **M**: Apply gease to slanting line portions.
- Adjust the height of aperture lever to 3.4±%, mm by turning eccentric pin for aperture lever adjustment.

 Tool: J18004
- Adjust the eccentric pin for mirror SW adjustment so that the mirror SW goes ON at the position where mirror comes between 0 and half of the thickness of mirror holding sponge, while pushing the mirror up vertical lever toward the direction indicated by arrow.

INSPECTION OF AF-RELATED SW

	С	S	М	Push lens release button.
AF A/M SW	ON	ON	OFF	ON (C or S mode) → OFF
AF S/C SW	ON	OFF	OFF	

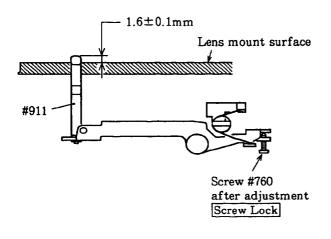

Front diecast is grounded.

INSPECTION OF AF DRIVING UNIT OPERATION

Apply 6 (V) power to the AF motor and check to see if operation is normal or if there is noise in the gears.

Check also to see if operation is normal when the AF motor rotates in normal or reverse direction.

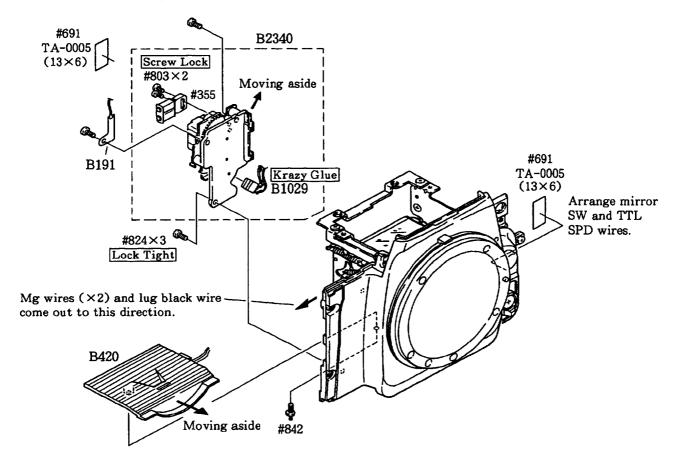

HEIGHT ADJUSTMENT OF AF COUPLING PIN #911

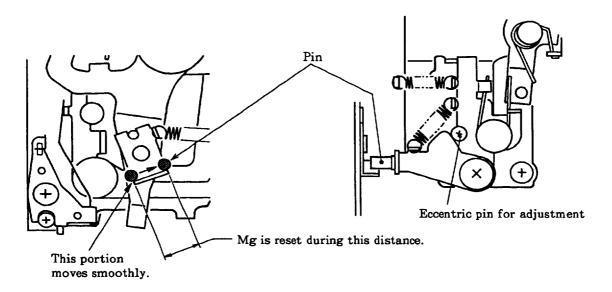

- Adjust the height of AF coupling pin #911 with a screw #760.
- Push the lens release button two or three times, and measure the height with slide calipers.
- The height of AF coupling pin #911 should be under the surface of lens mount surface when the height of lens release pin is set to 0.4mm. If the pin #911 is over the mount surface, adjust it by 1.6mm in the minus direction.

APERTURE CONTROL UNIT, MIRROR BOX BOTTOM PLATE

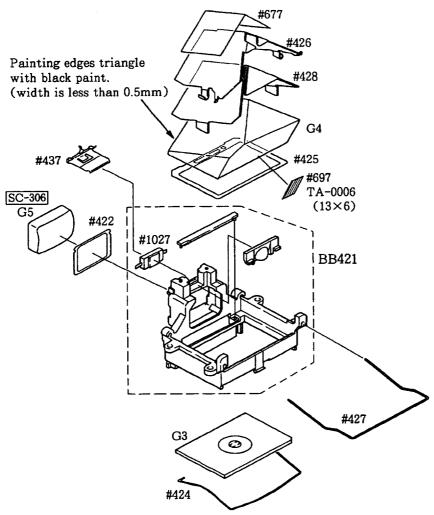

- Apply Sealglow at the foot of TTL SPD.
- Pull out wires (×2) through the gap between L base plate and AF motor to the film rewind side.

ADJUSTMENT OF APERTURE CONTROL Mg RESET POSITION

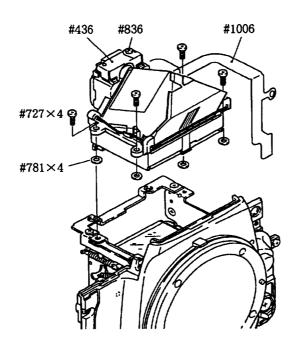

PENTA PRISM, SCREEN

- Refer to page A34 to see how to mount AE SPD #1027.
- As for G3, the fresnel surface down.

PRISM BOX

- A 15 • F-601_{AF} -

ADJUSTMENT OF ANGLE (45°) OF MAIN MIRROR

- 1 Remove focusing screen.
- 2 Set the tool J18197 in place of the prism or the focusing screen.
- 3 Attach optical parallel J18037 on the lens mount.
- 4 Measure the angle by your eye-estimation using an Auto Collimator.

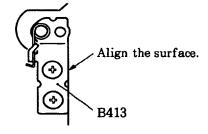

Standard value

• Horizontal error: Within ±20'

• Vertical error: Within ± 5'

• Distortion: Within ± 8'

(5) If horizontal error is found, adjust the error by moving B413 up and down.

- (6) If vertical error is found, adjust it by rotating the eccentric pin in the mirror box with a hex key.
- The Check the accuracy by moving the mirror several times with your finger. If it is out of the allowable range, repeat steps 5 to 7.

Reference: Viewfield of collimator J19002 is approx. 40'.

ADJUSTMENT OF ANGLE (45°) OF SUB MIRROR

- ① Return the screen G3 back to the original position.
- 2 Set the tool J18196 for determining the sub-mirror angle of 45° on the lens mount correctly.
- 3 Measure the angle by your eye-estimation using an Auto Collimator.

Standard vertical error: Within $\pm 10'$

① If there is vertical error, adjust it by rotating the eccentric pin for sub-mirror in the mirror box.

Note: Horizontal error cannot be adjusted.

⑤ Check the accuracy by moving the mirror with your finger several times. If it is out of the range, repeat the procedures ③ to ⑤.

ADJUSTMENT OF INFINITY (∞)

Use a reference lens J18010 and adjust the washers #781×4 so that the infinity (∞) comes within the range of ± 0.05 . After the completion of the body assembly, the accuracy of mirror angle (45°) is in error when the infinity is adjusted. But it is possible to adjust the accuracy if the infinity is within the range of ± 0.05 .

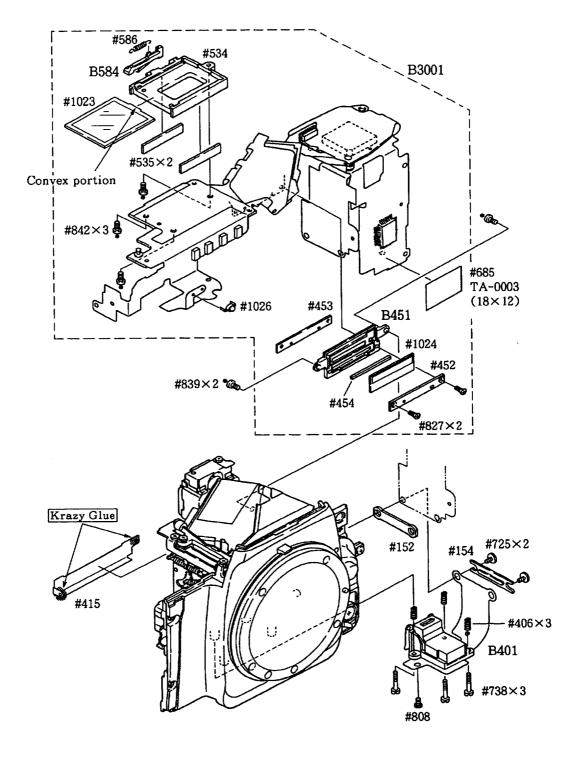

AF FPC, MAIN FPC, LIGHT BAFFLE PLATE

(1). (15).

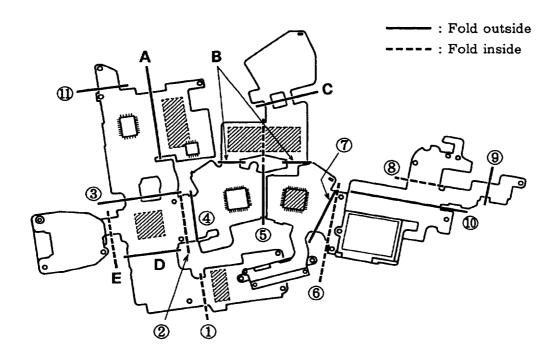

(

Note: More detail for assembling, refer to from next page.

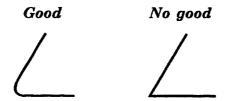

- Remove IL supporting plate #320 to attach main FPC.
- Apply Sealgrow at the foot of AE SPD.
- Fasten screws #738×3 approx. 9 turns.

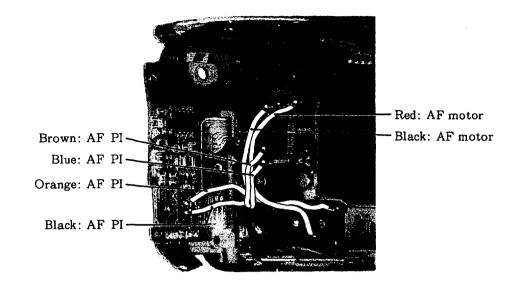

BENDING OF MAIN FPC

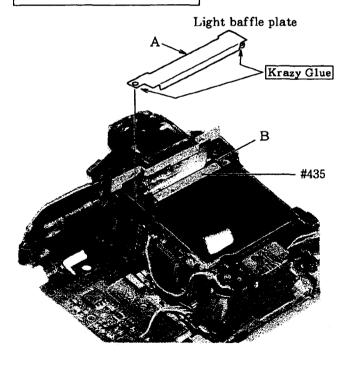

- /////: Double coated adhesive tape
- Fold the portions indicated by numbers ① to ① with a rod \$\phi 1.5\$ to ensure they stay bend.
- Fold the portions indicated by letters A to E with your fingers.
- Align screw holes when bonding the portions indicated by letters
 A and B.
- Do not fold the above mentioned portions clearly as shown below.

SOLDERING OF WIRES TO AF FPC AND MAIN FPC

LIFHT BAFFLE PLATE

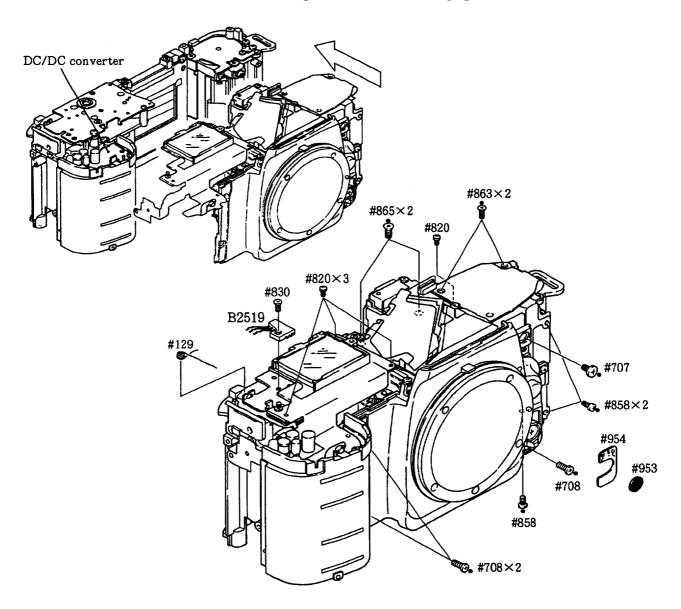

Paste light baffle plate on the top end portion to which mirror holder does not attach when the mirror moves up and down.

Target of pasting position "A" is a little down from "B" that of #435. (Approx. 0.2mm down)

3. ASSEMBLING OF FRONT PLATE AND REAR BODY

ALIGNING FRONT PLATE AND REAR BODY

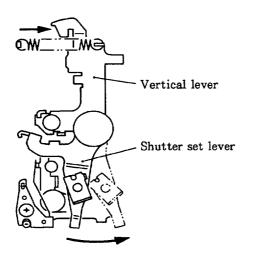

Note: More detail for assembling, refer to from next page.

Arrangement of wires

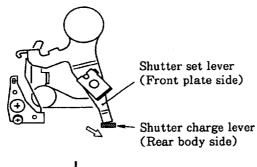

Arrange wires attached to the front plate and the rear body with care not to pinch them.

• Aperture Mg	×2	 Shutter wires 	×5
Aperture PI	×4	 Film advance completion SW 	×1
• Mirror SW	×2	• Film detection, film advance,	film rewind SW (one each)
• TTL SPD	×2	 GND black wires 	×2
• f - fo	$\times 3$	• Film advance motor	×2
• AF S/C SW	$\times 1$	• AF motor	$\begin{pmatrix} \times 2 \\ \times 4 \end{pmatrix}$ Already soldered.
• AF A/M SW	$\times 1$	• AF PI	×4 Aiready soldered.

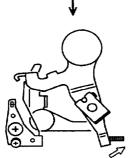

- Push vertical lever with tweezers to set the shutter set lever to the lens mount side.
- Shutter charge lever on the body side should be on the lens mount side.

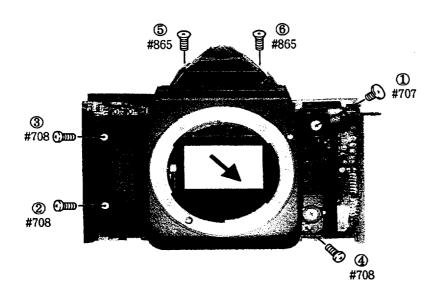

Mounting position

• Mount the shutter set lever on the shutter charge lever of the body side.

 Push the shutter lever lightly and place the shutter set lever over it.

Push the front plate toward lower right and fasten screws in the order from ① to ⑥.

CONFIRMATION OF ALIGNING OF FRONT PLATE AND REAR BODY

Position a manual film advance tool J15287.

- The mirror must move up when the tool is truned counter-clockwise.
- The mirror and the shutter curtain must move down when the tool is turned clockwise.

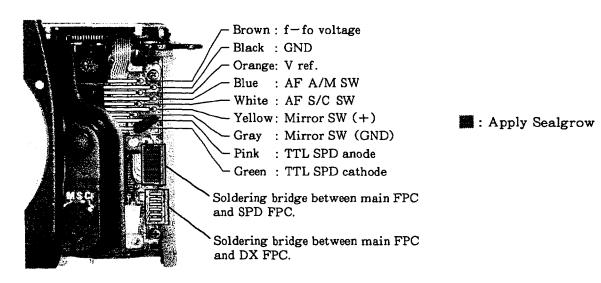

SOLDERING AT EACH PART

Solder following 6 portions:

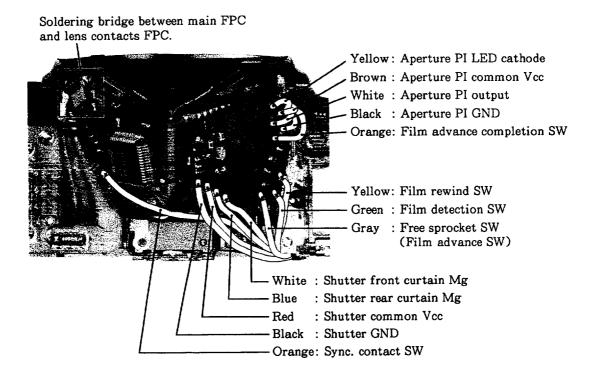

- 1. Between main FPC and DX FPC
- 2. Between main FPC and SPD SPD
- 3. Between main FPC and lens contact FPC
- 4. Between main FPC and command dial brush
- 5. Between main FPC and DC/DC converter
- 6. Between main FPC, DC/DC converter and battery contacts

Soldering wires $(\times 27)$ at four portions

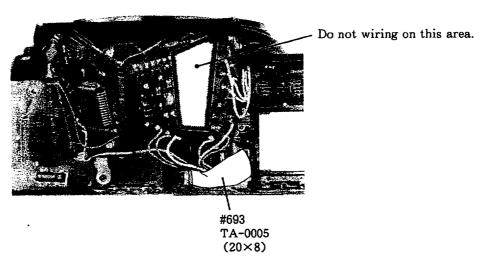

1. Front

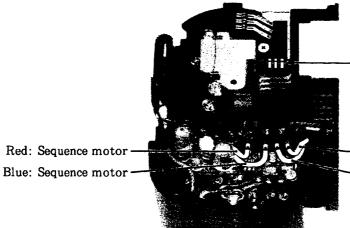

2. Top of penta prism

Paste adhesive tape on the portion as shown in the picture below after arranging wires.

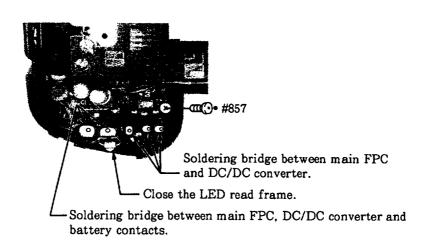

3. Top of hand grip

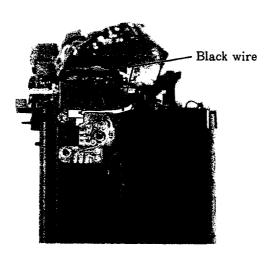

Soldering bridge between main FPC and command dial brush.

- Light Blue: Aperture Mg

Red: Aperture Mg

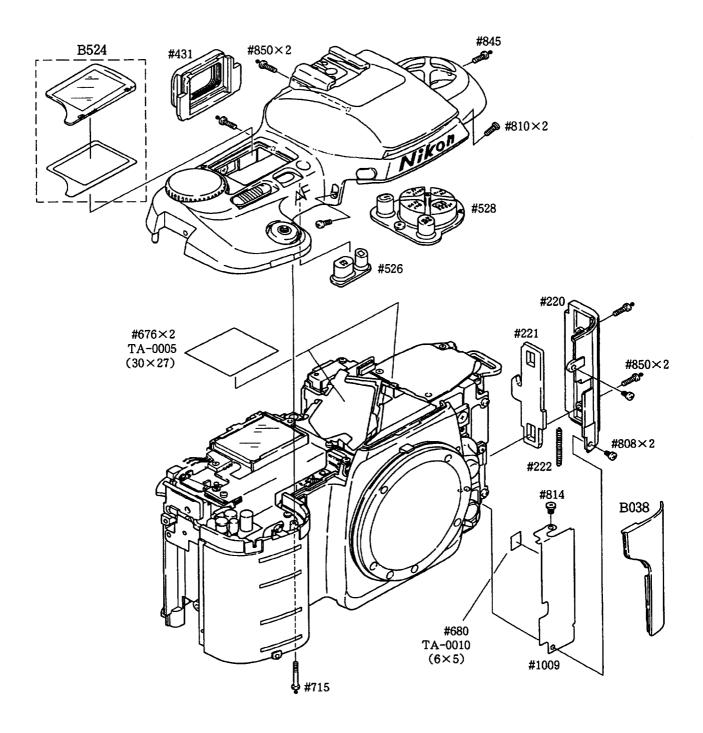

4. Black wire of rug plate at hand grip side

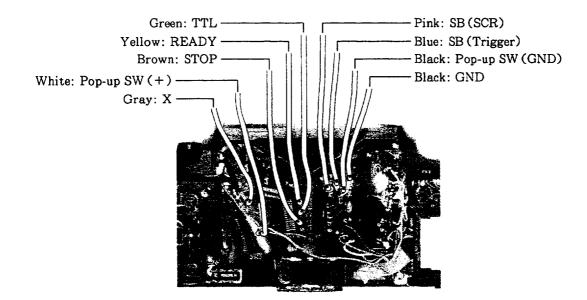

CAMERA BACK OPEN/CLOSE COVER PLATE TOP COVER

Note: More detail for assembling, refer to from next page.

SOLDERING PORTION OF TOP COVER WIRES

Black: GND (Solder wire to the negative land of battery contacts.)

White: Shutter pre-release SW

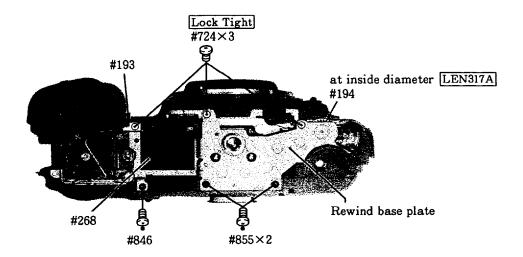

Red: Shutter release SW

Pass thick red and black wires of top cover downward through this space.

Notes on assembling top cover:

- ① Clean contacts and patterns.
- ② Clean dust and particle from external LCD.
- 3 Move the AE lock lever to the right.
- Arrange wires (to prevent wires from pinching).
- ⑤ Set the eyepiece frame #431 first, then mount the top cover.
- 6 Paste adhesive tapes #676×2 to cover the whole soldered portions (to avoid short-circuit between soldered portions and top cover).

REWIND BASE PLATE

#268 is a strong double coated adhesive tape for securing the main condenser #1033.

INSPECTION AND ADJUSTMENT OF BODY BACK

Measure from the lens mount surface to the external film guide rail.

Standard value: 46.67 ± 0.02 mm Parallelism: Within 0.02mm

If the value is out of the standard range, adjust the distance by inserting a washer under the lens mount or use attaching screws $\#855 \times 2$ and #846 of the film rewind base plate. (Unfasten screws and move the front plate back and forth.)

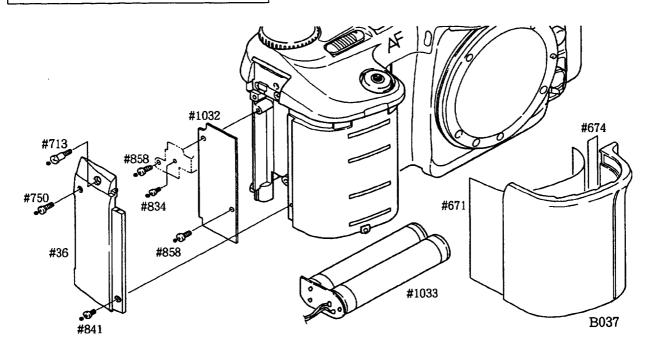

INSPECTION AND ADJUSTMENT OF INFINITY (∞)

Use reference lens J18010 and collimator J19001.

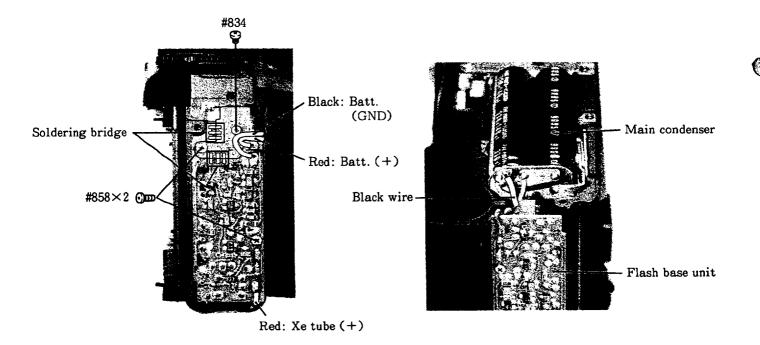

Srtandard value: ±0.03 calibration

If the value is out of the standard range, adjust the value by rotating the main mirror stopper in the mirror box using a hex key. When making inspection, operate the main mirror a few times with your finger.

FLASH BASE UNIT, HAND GRIP

SOLDERING PORTION OF FLASH BASE UNIT

INSPECTION AND ADJUSTMENT OF AE ACCURACY

- Operation should be performed according to the instructions as shown on the computer.
- Use a floppy disk (J18217A or J18217B) for inspection and adjustment.

Inspection and adjustment items

- 1. Adjustment of f-fo
- 2. Inspection and adjustment of AE- γ , AE level (A mode)
- 3. Inspection and adjustment of aperture control (S mode)
- 4. Inspection and adjustment of M 1/2000 sec. (M mode)
- 5. Inspection and adjustment of TTL- γ , TTL level (TTL mode)
- * Perform the above five items in order when replacing main FPC.

Others

- 1. Return the camera after fully deleting the sequence error records.
- 2. Run the "Check sum" program when data in the EEPROM has been changed separately.
- 3. Set options to standard settings unless otherwise requested by customers.

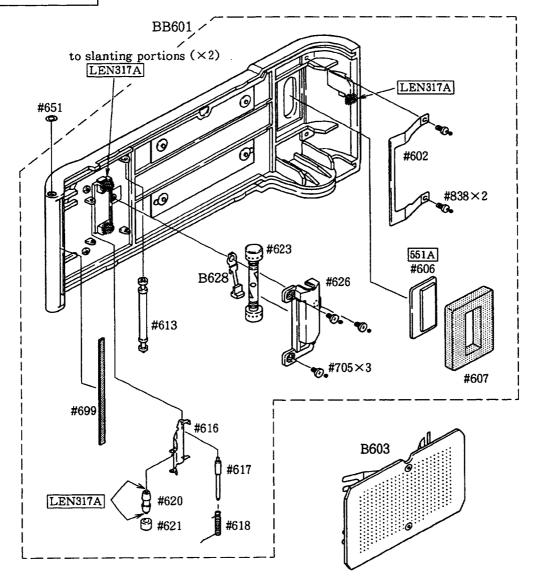

INSPECTION AND ADJUSTMENT OF AF ACCURACY

- Operation should be performed according to the instructions as shown on the computer.
- 1. When AF FPC is replaced or disassembled.

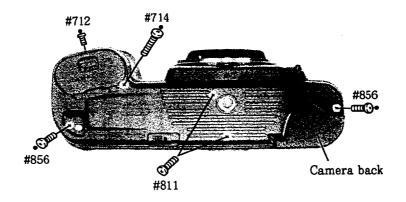

CCD output
$$\rightarrow$$
 YAW \rightarrow Pitch \rightarrow Δ Z \rightarrow Hard AGC

- 2. CCD output (adjusted data)
- 3. Checking of AF accuracy

CAMERA BACK

BOTTOM COVER

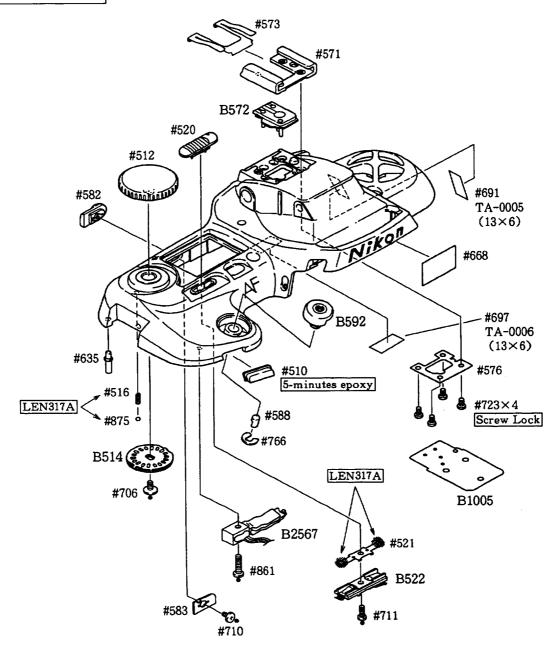

INSPECTION AND CLEANING OF EACH PORTION

Refer to the standard value of inspection.
